

**AMENDMENTS TO THE CLAIMS**

1. (Currently Amended) A computer ~~system-device~~ comprising:  
a storage having at least one file;  
a processor controlling a secure state and an insecure state of said computer device,  
~~system~~, said processor having at least one application that accesses said file while said ~~system~~  
computer device is in said insecure state,  
wherein the computer device transitions from a standby state directly to the insecure  
state, and  
wherein transitions from the insecure state to the secure state are controlled based on a  
user login independent of said at least one application.

2. (Original) The system according to claim 1, said application being a calendaring program that displays calendar data from said file.

3. (Original) The system according to claim 1, said application being a calculator program.

4. (Currently Amended) A computer ~~system-device~~ comprising:  
a processor controlling a secure state and an insecure state of said system, said processor having at least one application that ~~may be run~~ is executed while said system is in said insecure state, wherein the processor is configured to:  
cause the computer device to transition from a standby state directly to the insecure state,  
and  
control transitions from the insecure state to the secure state based on a user login independent of said at least one application.

5. (Original) The system according to claim 4, said application is a note taking application for receiving textual notes.

6. (Original) The system according to claim 4, said application is a note taking application for receiving handwritten notes in electronic ink.

7. (Original) The system according to claim 4, said application is a voice recording application.

8. (Original) The system according to claim 4, said application is a calculator application.

9. (Original) The system according to claim 4, said application is a game.

10. (Original) The system according to claim 4, further comprising:  
a storage for storing information when said system is in said secure state, said information originating from said application interacted with while said system was in said insecure state.

11. (Original) The system according to claim 4, said application is a calendaring application and said system further comprising:  
a storage for storing calendar information, said information being accessed by said calendaring application.

12-20. (Canceled)

21. (New) The computer device according to claim 1, the computer device being a personal digital assistant.

22. (New) The computer device of claim 1, wherein the storage is synchronized with information in a second storage, said second storage having a second file accessed by an application while the computer device is in the secure state.

23. (New) The computer device according to claim 4, the computer device being a personal digital assistant.
